### DETAILED ACTION

The Substitute Specification filed 4-15-02 has been entered.

Claims 10-18 and 20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As to claim 10, which of the several listed forces does "the force" (line 8) refer back to? ✓

As to claim 20, "the measuring device" lacks antecedent basis. ✓

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 10 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Fischer et al.

Fischer et al teach a method to control a biaxial wheel test stand for simulating driving loads, the stand including vertical (9) and horizontal (10) servo-hydraulic load cylinders, pivot point (either 17, 35 or 37) which can be adjusted by a cylinder 27, 16, the stand including a drive unit with a driven drum 11 having rings 15, the wheel being

tested being pressed against the rings with the load unit, whereby the vertical and horizontal load cylinders are adjusted (i.e. variable as per "variably" on col. 4, lines 55 and 60), the method including adjusting the vertical force, horizontal force and angle to create "service-like load conditions" (col. 9, lines 38-39) conditions.

Fischer does not expressly relate the "service-like conditions" to forces and angle to radial and side forces "previously determined during a road test".

As to claim 10, Fischer's knowledge of "service-like load conditions" is suggestive that such forces were previously determined in a road test.

As to claim 19, note was made of the combination of the last 4 lines (" a control and evaluation ...camber cylinder") of the claim with remaining claim limitations.
